

Dashboard Documentation

Overview

The Sales Analysis Dashboard was developed in Microsoft Power BI using the cleaned ApexPlanet sales dataset. It provides an interactive interface for monitoring sales performance.

Dashboard Components

The dashboard includes KPI cards, Category Sales chart, City Sales chart, Age Group Sales chart, Gender distribution chart, Product Sales chart, and slicers for Age Group, Category, Gender, City, and Order Date.

Interactivity

Users can filter data using slicers. All visuals interact dynamically, allowing detailed exploration of customer segments and sales performance.

Data Model

The dashboard is built using Order Date, Customer, Product, Category, Quantity, Unit Price, Total Sales, Gender, Age Group, and City fields.

Business Value

The dashboard helps management identify top-performing products, profitable customer segments, regional sales patterns, and opportunities for business growth.

Future Improvements

Additional KPIs such as Profit Margin, Customer Retention, and Monthly Growth can be incorporated when corresponding data becomes available.
