

Deep Dive Analysis Report

1. Objective

This report presents a segmentation-based analysis of the Sales Analysis Dashboard developed in Power BI. The objective is to identify high-performing customer groups, products, cities, and categories to support business decision-making.

2. Scope of Analysis

The analysis uses Total Sales as the primary metric and segments the data by Product Category, City, Age Group, Gender, and Product.

3. Category Analysis

Electronics is the highest-performing category with approximately 51M in sales. Education follows with around 25M, while Grocery and Furniture contribute nearly 22M each. Fashion records the lowest sales among the displayed categories.

4. City Analysis

Patna is the leading city with about 21M in sales. Kolkata, Bengaluru and Mumbai follow closely, while Hyderabad records comparatively lower sales among the visible cities.

5. Customer Segmentation

Customers aged 50+ contribute the highest sales. Age groups 31–40 and 41–50 also contribute significantly, whereas customers below 20 generate the least revenue. Female customers contribute slightly more sales than male customers.

6. Product Analysis

Laptop, Mobile and Book are among the top-selling products, indicating strong demand for technology and educational products.

7. Business Recommendations

Increase inventory for Electronics and top-selling products, prioritize marketing in top-performing cities, design targeted campaigns for customers aged 50+, and improve sales strategies for lower-performing categories.

8. Conclusion

The dashboard effectively identifies profitable customer segments and product categories, enabling data-driven planning and strategic decision-making.
